

Der Rahmen dieser neuen Akustikwand basiert auf der Mila-wall-Serie 100. Die Materialien und der Aufbau der Wand sind für eine maximale Schallabsorption optimiert.

MILA-WALL ACOUSTIC

**BETTER BETTER  
ACOUSTICS OPTICS**

## MILA-WALL ACOUSTIC

---

# REDUCES NOISE AND ALSO LOOKS GOOD

The new sound absorbing panels from mila-wall unite aesthetics and significant improvements in acoustics. No other wall of this thickness reduces reverberation better than Mila-wall Acoustic. When multiple groups visit an exhibition, noise can be disturbing.

Not with Mila-wall Acoustic. Previously, fabric covered walls were used to reduce noise, and while they work, they are not aesthetically appealing. Mila-wall Acoustic looks like Mila-wall, but dampens the reverberation felt in the room.

On the exterior of a panel, only micro-fine holes differentiate Mila-wall Acoustic. The subtleties of the noise reduction remain the secret of the designers.

Mila-wall Acoustic was developed in cooperation with the renowned Fraunhofer Institute IBP. When tested in the independent institute's reverberation chamber, outstanding values were measured.
